

ABOUT US

LIEBERT

As part of Emerson Network Power, the Liebert brand delivers power, cooling and monitoring technologies to commercial and government facilities to protect and support critical systems. Our customers include every company in the FORTUNE 500 and thousands of other large, mid-sized and small agencies and organizations. They know Liebert technologies will:

- Eliminate downtime
- Enable fast, efficient response to changes in technology and business strategies
- Protect and extend their investment in information technology systems
- Reduce capital and operating costs
- Reduce energy consumption
- Solve data center infrastructure problems

From the rack-mount UPS that keeps a small business network running to the power and cooling systems in the world's most critical data centers, Liebert technologies and Services create and support the infrastructure that information technology depends on.

With a string of innovations that include the first rack system with integrated power and cooling, the first high density cooling solution or the first commercial use of dual-bus technology, Liebert has consistently anticipated changing computing environments and responded with solutions that improve the performance, availability and manageability of IT systems.

The breadth and depth of Liebert solutions ensures the correct application in most every situation. This optimizes performance, flexibility and energy efficiency. To ensure this customers are supported by a network of local specialists that provides our customers and partners with unmatched application support, and the industry's largest service organization.

Our mantra and promise is Efficiency Without Compromise™, and we employ this through the lifecycle of the data center, enabling customers with a highly flexible, available and controlled environment.

EMERSON NETWORK POWER

In a network-driven economy where seconds of downtime can turn into millions in losses, Emerson Network Power offers the technology, expertise, and global reach to build and support your telecommunications and data network infrastructure. Around the world, our customers count on us to deliver reliable power, precision cooling, connectivity and embedded solutions for computer, communications, healthcare and industrial systems -- all backed by the largest local service and support network in the industry. We prepare you from grid-to-chip, consistently anticipating your rapidly changing environment so your operation runs without interruption. It's the peace of mind you expect from the global leader in enabling Business-Critical Continuity.

SERVICES

Partnering with Emerson Network Power brings you leading infrastructure brands that can integrate easily and improve performance.

Liebert® Power, Cooling & Monitoring

The Liebert brand is recognized as the industry's premier source in precise power distribution, power protection, voltage regulation equipment for computer applications, precision environmental control systems and site monitoring systems to support and protect computers and other sensitive electronics. Liebert systems provide the industry's broadest selection of network protection options, including UPS, surge suppression, critical systems monitoring and unique integrated products to ensure availability of IT systems.

Liebert Services™

Liebert Services is the industry leader in overall site service and maintenance of the equipment on which a complex computer installation depends. Service capabilities covers everything from design and construct scenarios through to total service and maintenance solutions and deploys the industry's largest and most highly trained local service engineers to deliver guaranteed response times.

Knurr Racks & Enclosures

Provides rapid, reliable and innovative racks and enclosures. From tool-less configurations, the industry's leading airflow panels, numerous mounting options, blanking panels, cable management and the ability to integrate power & cooling and create your own SmartAisle™ intelligent containment centers. Knurr racks offer the foundation to future-proof a data center.

Albér Battery Monitoring

Often the weak link in power availability, Alber brings a full line of battery monitoring and test systems, complete with diagnostic, trending and alert features to ensure maximum availability and efficiency.

Avocent/Aperture Infrastructure Management

With over 20 years of experience, Avocent & Aperture are premiere global providers of software for managing the physical infrastructure of data centers. They enable organizations to visually manage their data centers and automate the critical processes necessary to meet today's data center challenges, while reducing operational risks and improving efficiency through the planning and management of data center resources. In short, they help data center professionals plan, control and manage the critical infrastructure.

ASCO

Recognized as a world leader in emergency and standby power transfer solutions, over the past 80 years, ASCO Power Technologies has pioneered every major product innovation in power transfer and controls technology. ASCO provides a full range of quality driven automatic transfer switches and power control systems to safeguard data and telecommunications networks, industrial processes and critical installations from health care facilities to financial transaction centers. ASCO products breed reliability as a result of product innovation, code compliance, proven designs, configuration flexibility, quality, ease of operation and serviceability.

EXPERIENCE

Liebert pioneered the computer support industry when we introduced precision cooling for IBM mainframes back in 1965. Within a few years, there were additional Liebert technologies supporting the demands of critical computer protection in power conditioning, distribution, uninterruptible power, critical support monitoring, racks and services for all size systems.

Today you'll find the Liebert brand inside of millions of IT site applications, including the entire Fortune 500, every major federal agency and many state and local governments - helping them maintain systems availability, reduce energy consumption and ensure rapid adaptability for the data center.

DoD and Civilian IT applications

State agencies

local municipalities

Commercial data operations

Healthcare

Education

Finance

Co-location centers

Cloud providers

And more

Expertise and support is always minutes away. Operations exist in every major country. Over 500 local sales engineers help customers daily. Service is local with some 400 factory trained customer engineers ready to visit any site with guaranteed response time. Customer response centers are manned 24x7x365.

It all exists to optimize customer IT operations and deliver Efficiency Without Compromise™.
